Nuxt v3.9 is out →

The Intuitive Vue Framework

Nuxt is an open source framework that makes web development intuitive and powerful.
Create performant and production-grade full-stack web apps and websites with confidence.

Get Started

What is Nuxt?

Trusted by the best front-end teams

The power of Vue Components

We love Vue Single-File Components as much as you do. Simple, intuitive and powerful, Nuxt lets you write Vue components in a way that makes sense. Every repetitive task is automated, so you can focus on writing your full-stack Vue application with confidence.

[!\[\]\(cbe80b694ebd74fcfe136a095b608235_img.jpg\) Learn about Views](#)[!\[\]\(a03a7eb2f4046e1d3c76772003e549ea_img.jpg\) Hello World Example](#) app.vue

```
<script setup>
useSeoMeta({
  title: 'Meet Nuxt',
  description: 'The Intuitive Vue Framework.'
})
</script>

<template>
  <div id="app">
    <AppHeader />
    <NuxtPage />
    <AppFooter />
  </div>
</template>

<style>
#app {
  background-color: #020420;
  color: #00DC82;
}
</style>
```

Static or Dynamic, the choice is yours

Decide what rendering strategy you need at the route level. By leveraging the hybrid rendering, you can get the best of both worlds: the performance of a static site and the interactivity of a dynamic one.

Learn about Hybrid Rendering

Nuxt on the Edge

The screenshot shows a code editor interface with two tabs: `nuxt.config.ts` and `pages/index.vue`. The `nuxt.config.ts` tab is active, displaying the following code:

```
export default defineNuxtConfig({
  routeRules: {
    // Homepage pre-rendered at build time
    '/': { prerender: true },
    // Product page generated on-demand, revalidates in background
    '/products/**': { swr: true },
    // Blog post generated on-demand once until next deploy
    '/blog/**': { isr: true },
    // Admin dashboard renders only on client-side
    '/admin/**': { ssr: false },
    // Add cors headers on API routes
    '/api/**': { cors: true },
    // Redirects legacy urls
    '/old-page': { redirect: '/new-page' }
  }
})
```

Compose with everything you need.

Routing & Layouts

File based routing system to build complex views and interfaces with a powerful and conventional approach.

Data Fetching

Composables that run on the server to fetch data for your components and enable you to render content in different ways.

Assets & Style

SEO & Meta Tags

Image, Font and Script optimizations with a built-in support for CSS Modules, Sass, PostCSS, CSS-in-JS and more.

Middleware

Run custom code such as authentication, localization or A/B testing before rendering a page or a group of pages.

Production ready and indexable by search engines while giving the feeling of an app to the end-users.

State Management

Nuxt provides a simple way to share a reactive and SSR-friendly state between components.

Transitions

Create smooth transitions between layouts, pages and components with a built-in support for Vue & browser transitions.

Error Handling

Built-in error handling and logging to help you debug your application and provide a better user experience.

Layers

Server Routes

Extend your Nuxt application with another Nuxt application to reuse components, composables, layouts,

Auto Imports

Nuxt auto-imports helpers, composables, and Vue APIs to use across your app without explicitly importing them.

Create API endpoints and server routes to securely connect with third party services and consume from

TypeScript

Nuxt provides helpful shortcuts to ensure you have access to accurate type information when you are coding.

Ship faster with endless integrations

Integrate with your favorite tools and services. Nuxt is built to be flexible and can be extended with a robust modules ecosystem. Connect your application with popular headless CMS, eCommerce, Database or UI/UX libraries with a single line of code.

[Explore Nuxt Modules](#)[Learn about Modules](#)

**Built by developers
around the world.**

The development of Nuxt and its ecosystem is led by an international team. From contributors to developer advocates, the community is made up of members with different horizons and skills. We are happy to see new members every day and encourage anyone to join us and help in many ways: answering questions, giving a talk, creating modules and contributing to the core.

Trusted by the World Wide Web.

"Nuxt offers a compelling solution and a great ecosystem to help you ship fullstack Vue apps that are performant and SEO friendly. The flexibility to choose between SSR and SSG is icing on the cake."

Evan You

Creator of Vue.js and Vite

"Nuxt is a fantastic choice for teams building a production-grade product on the web. It aims to bake in performance best-practices while maintaining excellent Vue.js DX."

Addy Osmani

Chief Engineer of Chrome

"Nuxt has been an incredible source of innovation and inspiration for developers and framework authors alike. It's been amazing to see its growth in web projects of all sizes on the web."

Guillermo Rauch

Co-founder and CEO of Vercel

"Nuxt has a unique approach of combining a great developer experience with reusable, fully integrated features that speed up the development and performance of your next website or application."

Dominik Angerer

Co-founder of Storyblok

"Nuxt has outstanding developer productivity, experience, and performance right out of the gate! There's so much attention to detail, ensuring teams have everything at their fingertips to productively build all manners of applications."

Sarah Drasner

Director of Engineering, Google

"The moment I used Nuxt for the first time I felt in love with it. Apart from its scalability, performance and developer experience, the team behind of it is also fantastic. Thanks for developing such a great framework and making our lives much easier!"

Savas Vedova

Senior Frontend Engineer at GitLab

"Nuxt's blend of high performance and focused developer experience is a game changer. Its SSR and SSG flexibility, coupled with a community that's as vibrant as the Vue.js ecosystem, makes it a great choice for modern web projects."

Rijk van Zanten

CTO at Directus

 / NEXT.js =

The React Framework for the Web

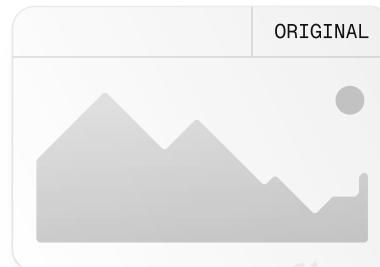

Used by some of the world's largest companies, Next.js enables you to create **full-stack Web applications** by extending the latest React features, and integrating powerful Rust-based JavaScript tooling for the fastest builds.

[Get Started](#)[Learn Next.js](#)

▲ ~ npx create-next-app@latest

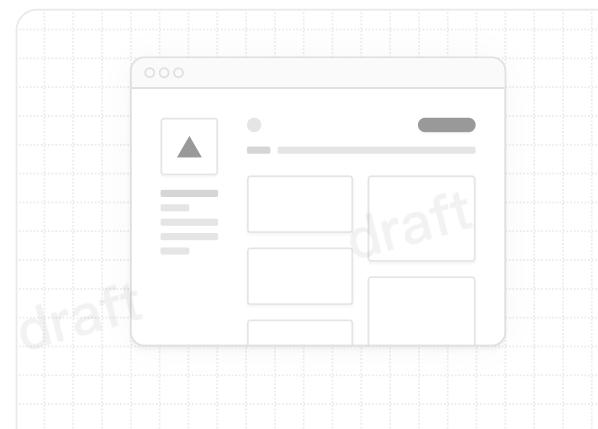

What's in Next.js?

All the tools you need to make the Web. Faster.

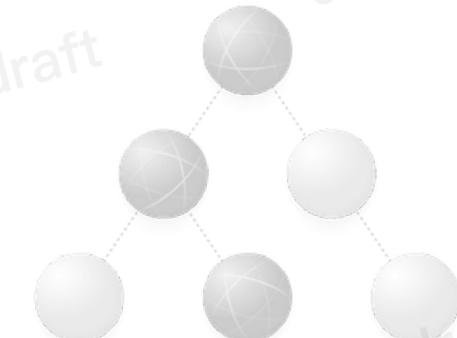

Built-in Optimizations

Automatic Image, Font, and Script Optimizations for improved UX and Core Web Vitals.

Dynamic HTML Streaming

Instantly stream UI from the server, integrated with the App Router and React Suspense.

React Server Components

Add components without sending additional client-side JavaScript. Built on the latest React features.

Data Fetching

CSS Support

Client and Server Rendering

Make your React component async and await your data. Next.js supports both server and client data fetching.

Style your application with your favorite tools, including support for CSS Modules, Sass, Tailwind CSS, styled-jsx, and more.

Flexible rendering and caching options, including Incremental Static Regeneration (ISR), on a per-page level.

Node.js & Edge Runtimes

Build scalable solutions with Serverless functions, and deliver fast dynamic, personalized content with the Edge.

Route Handlers

Build API endpoints to securely connect with third party services and consume from your frontend.

Advanced Routing & Nested Layouts

Create routes using the file system, including support for more advanced routing patterns and UI layouts.

Middleware

Take control of the incoming request. Use code to define routing and access rules for authentication, experimentation, and internationalization.

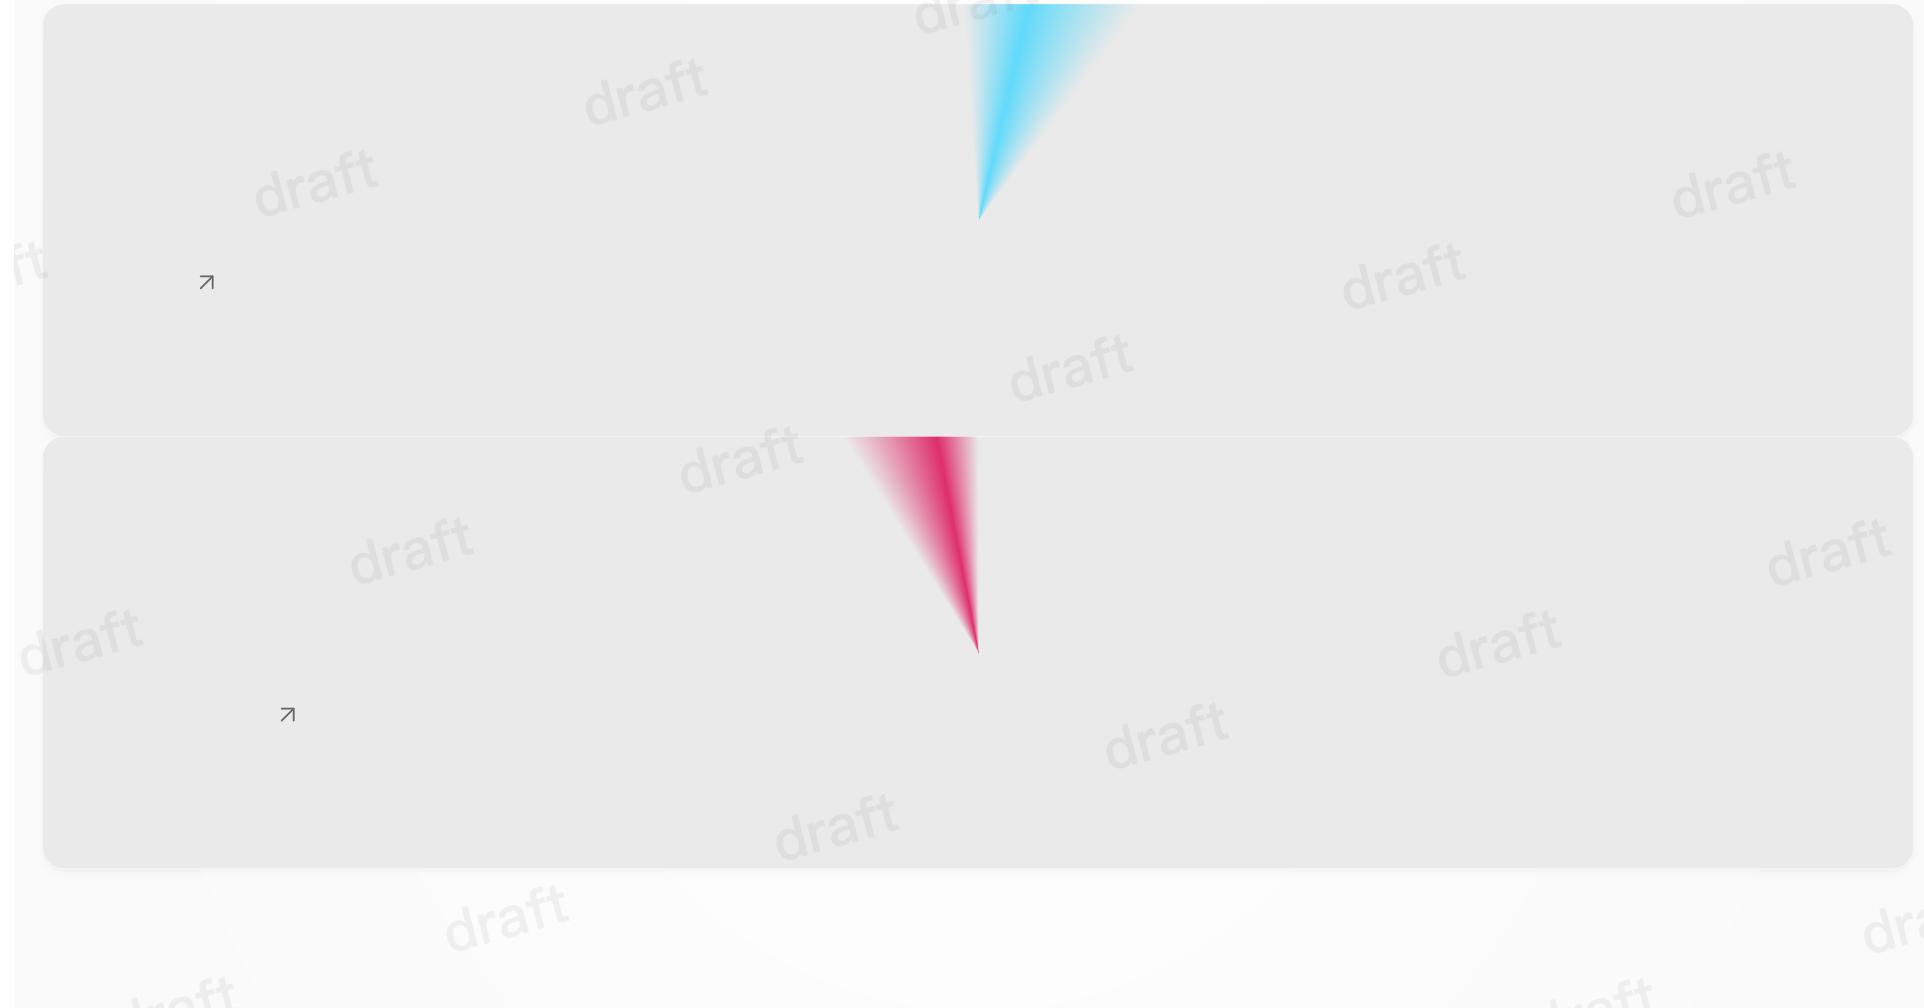

Next.js 14

The power of full-stack to the frontend. Read the release notes.

Built on a foundation of fast, production-grade tooling

Deploy Next.js to Vercel

[Starter](#)[Ecommerce](#)[Blog](#)[AI](#)[Edge Functions](#)[Edge Config](#)[Portfolio](#)[SaaS](#)[Multi-tenant Apps](#)[Realtime Apps](#)[Documentat](#)

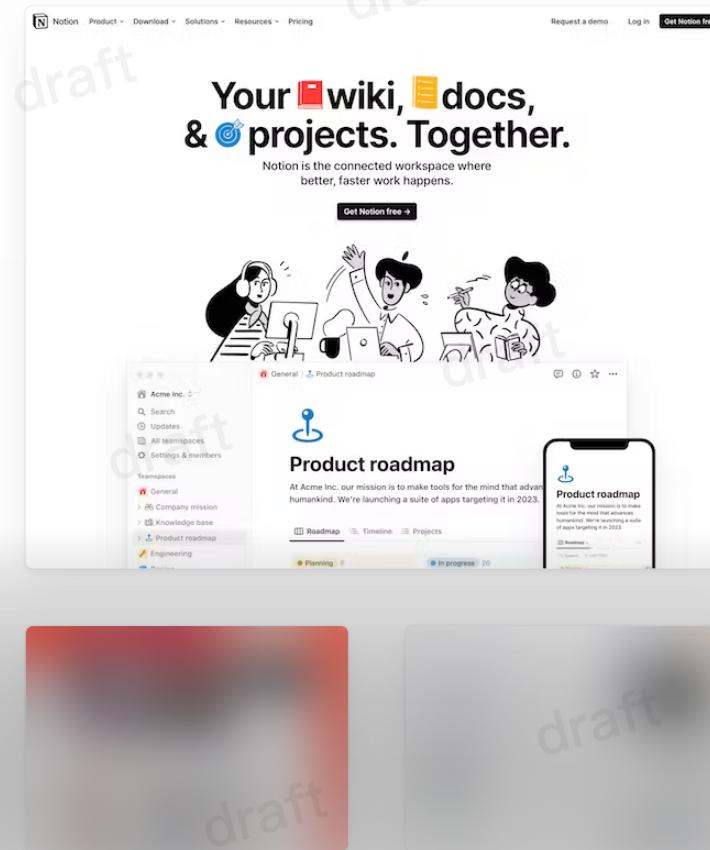

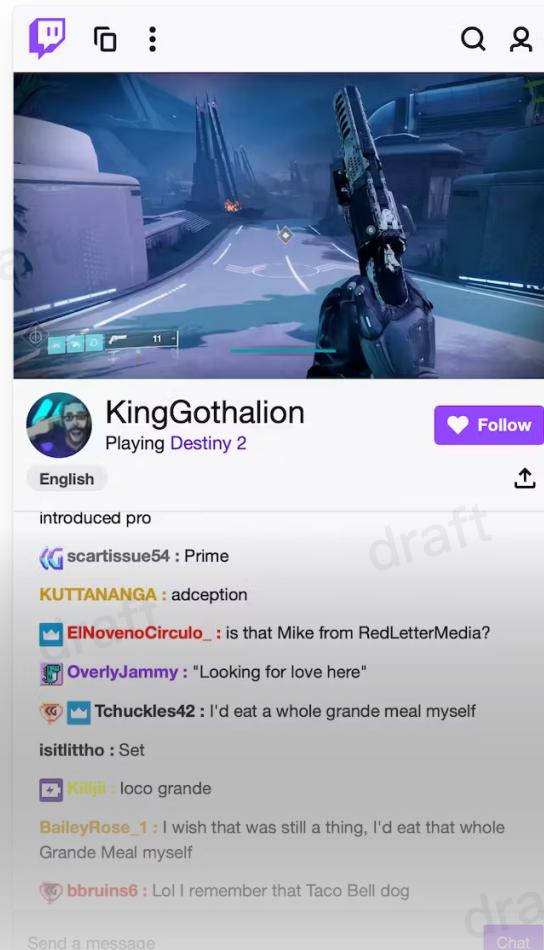

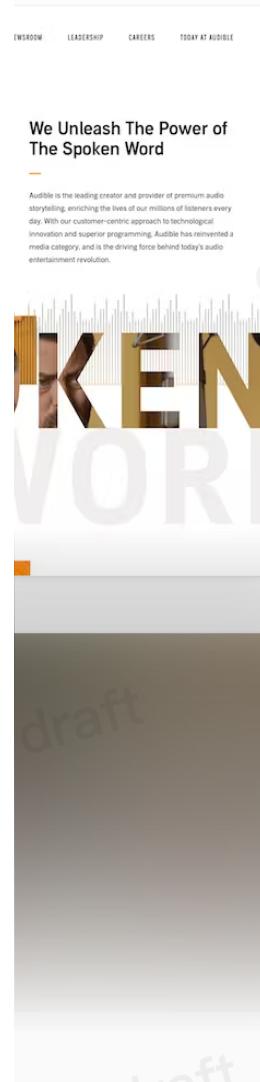

Vercel is a frontend cloud from the creators of Next.js,
making it easy to get started with Next.js quickly.

Jumpstart your Next.js development with pre-built solutions from Vercel and our community.

The collage includes the following elements:

- A screenshot of a Next.js template for a clothing store, showing a product page for a black jacket.
- A screenshot of a Next.js template for event photos, showing a grid of images from a 2022 event.
- A screenshot of the Vercel homepage with a "Deploy a Template on Vercel" button.
- A screenshot of the Vercel dashboard showing a "NEXT.js 13" badge.
- A screenshot of the Vercel documentation page with sections for Docs, Learn, Templates, and Deploy.
- A screenshot of the Next.js Boilerplate template, which is described as a "Next.js app and a Serverless Function API" built with Cloudinary.

The framework of choice when it matters

Peerless performance, efficiency and developer experience.

Next.js is trusted by some of the biggest names on the Web.

[View the Next.js Showcase](#)

“With Next.js at the helm of our headless tech stack, our developers can create features with velocity and speed, ultimately enabling users to create whatever, whenever they want to.”

Tatiana Mac, Senior Software Engineer

“My favorite UX feedback from customers is: “How is the app so fast?” Because we’ve built on Next.js and Vercel since day one, our pages load in an instant, which is important when it comes to mission-critical software.”

Fouad Matin, CEO

“Next.js has been a game-changer for our agency work and team collaboration. Its powerful features have allowed us to build high-performance websites quickly and efficiently like never before.”

Daniel Lopes, Frontend Developer
